

HII 10th Anniversary: Transformation

Conlan Hsu: In the past 10 years, I've seen a lot of change focused on innovation and modernization. We've stood up a new robotic welding line and invested in technologies, such as additive manufacturing. This makes me feel confident we're moving in the right direction and prepared for what comes ahead.

Jason Lugo: What I've seen in at the time that I've been here is that the company has expanded a lot to do all the work that perhaps wasn't considered typical shipbuilding. It provides different technology and different capabilities to our customers.

Candice McDougald: We're not only product focused, but I feel like Huntington Ingalls is also people focused. Down to just our health, our mental health, you can see those changes being made. There's a health center and that's what I've seen Huntington Ingalls do over the course of 10 years. Be a place that really cares about it's employees.

Portia Tatum: I've seen more diversity. I've seen more women move into positions. The jobs in the past 10 years have gotten easier, because the training, asking the questions of my first class, my half hat, my foremen, it's just become a whole lot easier. I'm able to receive my blueprint, my job, and then just go in there and do it. But at the same time, I'm still new. And if I have questions, I'm very grateful for the people in my department that I work for. They have my back.

Amanda Carreiro: In the next 10 years, I'm sure to see immense growth and autonomous technology used in exciting breakthrough ways. Congratulations to our 10 year anniversary for HII.
