Trina Garrett

I chose to get the vaccination because I think it's important for safety and our health and plus I miss being able to travel and see my friends and family safely.

What I've been doing at the shipyard is I've been working through getting tests done for the overhaul of CVN-73 and we're having to make sure we spread ourselves out because there's a lot of us and we're all still trying to get everything done on time.

I would very much encourage people to get it because if we want to get back to normal, what I keep calling it not having to wear a mask, getting to see people freely, we're going all need to get vaccinated, so we can help each other out.
